

AWS EC2 – Attach EBS Volume and Mount Permanently (Full Practical)

Task:

Create an EC2 instance, attach an additional EBS volume, and mount it permanently.

(a) Create EC2 Instance:

1. Login to AWS Management Console
Open <https://aws.amazon.com/> and sign in.
2. Open EC2 Dashboard
Go to Services → EC2.
3. Click Launch Instance
4. Enter Instance Name
Example: EBS-Server
5. Choose AMI
Select Ubuntu Server 22.04 LTS or Amazon Linux 2
6. Select Instance Type
Choose t2.micro (Free Tier)
7. Create Key Pair
Name: mykey
Format: .pem
Download and save it
8. Configure Security Group
Allow SSH (Port 22)
9. Launch Instance
Wait until instance is in Running state

(b) Create Additional EBS Volume:

1. Go to EC2 Dashboard
2. Click Elastic Block Store → Volumes
3. Click Create Volume
4. Set:
 - Volume Type: gp3
 - Size: 10 GB
 - Same Availability Zone as EC2 instance
5. Click Create Volume

(c) Attach EBS Volume:

1. Select the created volume
2. Click Actions → Attach Volume
3. Select EC2 instance (EBS-Server)
4. Click Attach

(d) Connect to EC2 Instance:

```
ssh -i mykey.pem ubuntu@3.110.25.60
```

(e) Check New Disk:

```
lsblk
```

(f) Format EBS Volume:

```
sudo mkfs -t ext4 /dev/xvdf
```

(g) Create Mount Directory:

```
sudo mkdir /mnt/myebs
```

(h) Mount EBS Volume:

```
sudo mount /dev/xvdf /mnt/myebs
```

(i) Make Mount Permanent:

```
sudo nano /etc/fstab
```

Add this line:

```
/dev/xvdf    /mnt/myebs    ext4    defaults,nofail    0    2
```

Save and exit.

(j) Verify Mount:

```
df -h
```

Result:

EC2 instance created successfully, EBS volume attached, formatted, mounted, and configured for ;
