

AWS EC2 Ubuntu Instance – Creation and Connection (Full Answer)

Task:

Create an EC2 instance using Ubuntu OS and connect using Command Prompt.

(a) Steps to Create EC2 Instance:

1. Login to AWS Management Console

- Open browser and go to <https://aws.amazon.com/>
- Click **Sign In** and enter your credentials.

2. Open EC2 Dashboard

- In the search bar, type **EC2**
- Click on **EC2 Dashboard**

3. Launch Instance

- Click on **Launch Instance** button

4. Enter Instance Name

- Example: MyUbuntuServer

5. Choose Operating System (AMI)

- Select **Ubuntu Server 22.04 LTS (64-bit)**

6. Choose Instance Type

- Select **t2.micro** (Free Tier Eligible)
- Example:
 - vCPU: 1
 - RAM: 1 GB

7. Create Key Pair

- Click **Create new key pair**
- Name: mykey
- Type: RSA
- Format: .pem
- Download the file and keep it safe

8. **Configure Network Settings**

- Allow **SSH (Port 22)**
- Source: Anywhere (0.0.0.0/0) for testing

9. **Configure Storage**

- Default: 8 GB SSD (can keep default)

10. **Launch Instance**

- Click **Launch Instance**
- Wait until instance state shows **Running**

11. **Copy Public IP**

- Select instance → Copy **Public IPv4 address**
- Example: 3.110.25.60

(b) Steps to Connect Using Command Prompt:

1. **Open Command Prompt**

- Press Win + R → type cmd → Enter

2. **Go to Key Pair Location**

- Example:

cd Downloads

3. **(Optional) Set Permission (if using Git Bash / WSL)**

chmod 400 mykey.pem

4. **Connect Using SSH Command**

ssh -i mykey.pem [ubuntu@3.110.25.60](#)

5. **First Time Connection**

- Type yes when asked:
"Are you sure you want to continue connecting?"

6. **Successful Login**

- You will see Ubuntu terminal like:
ubuntu@ip-172-31-xx-xx:~\$

Example Summary:

- Instance Name: MyUbuntuServer
- OS: Ubuntu 22.04 LTS
- Instance Type: t2.micro
- Key Pair: mykey.pem
- Public IP: 3.110.25.60

Result:

- EC2 Ubuntu instance created successfully.
- Connected to instance using Command Prompt via SSH.
