

AWS EC2 Ubuntu Instance – Connect Using PuTTY (Windows)

Task:

Create an EC2 instance using Ubuntu OS and connect to it using PuTTY from Windows.

(a) Steps to Create EC2 Instance (Ubuntu):

1. Login to AWS Management Console

- Open <https://aws.amazon.com/>
- Click **Sign In** and enter credentials.

2. Open EC2 Dashboard

- Search for **EC2**
- Click on **EC2 Dashboard**

3. Launch Instance

- Click **Launch Instance**

4. Enter Instance Name

- Example: MyUbuntuServer

5. Choose Operating System

- Select **Ubuntu Server 22.04 LTS (64-bit)**

6. Select Instance Type

- Choose **t2.micro** (Free Tier Eligible)

7. Create Key Pair

- Click **Create new key pair**
- Name: mykey
- Format: .pem
- Download the file

8. Configure Network Settings

- Allow **SSH (Port 22)**
- Source: Anywhere (0.0.0.0/0)

9. Configure Storage

- Default: 8 GB SSD

10. Launch Instance

- Click **Launch Instance**
- Wait until status = **Running**

11. Copy Public IP

- Example: 3.110.25.60

(b) Convert .pem File to .ppk (PuTTY Format):

1. Open **PuTTYgen** (PuTTY Key Generator)
2. Click **Load**
3. Select `mykey.pem`
4. Click **Save private key**
5. Save as `mykey.ppk`

(c) Connect Using PuTTY:

1. Open **PuTTY**
2. In **Host Name**, enter:
`ubuntu@3.110.25.60`
3. Go to:
Connection → SSH → Auth
4. Click **Browse**
 - Select `mykey.ppk`
5. Go back to **Session**
6. Click **Open**
7. Click **Yes** if security alert appears
8. Login successful:
`ubuntu@ip-172-31-xx-xx:~$`

Example Summary:

- Instance Name: MyUbuntuServer
- OS: Ubuntu 22.04 LTS
- Key Pair: mykey.pem → converted to mykey.ppk
- Public IP: 3.110.25.60

Result:

- EC2 Ubuntu instance created successfully
- Connected using PuTTY from Windows system
