

AWS EC2 – Create Instance and Upload File using SCP / WinSCP

Task:

Create an EC2 instance and upload a file from local system to EC2 using SCP or WinSCP.

(a) Step 1: Create EC2 Instance

1. Login to AWS Management Console
 - Open <https://aws.amazon.com/>
 - Sign in with your account
2. Open EC2 Dashboard
 - Search and select **EC2**
3. Click **Launch Instance**
4. Enter Instance Name:
Example: FileTransferServer
5. Select AMI:
 - Choose **Ubuntu Server 22.04 LTS**
6. Select Instance Type:
 - Choose `t2.micro` (Free Tier)
7. Create Key Pair:
 - Name: `mykey`
 - Format: `.pem`
 - Download and save file
8. Configure Security Group:
 - Allow **SSH (Port 22)**
9. Launch Instance and copy Public IP:
Example: `3.110.25.60`

(b) Step 2: Prepare Local File

1. Create a file in local system:

Example:

testfile.txt

2. Save it in a known folder:

Example:

C:\Users\Student\Downloads

(c) Step 3: Upload File using SCP (Command Prompt / Git Bash)

Command:

```
scp -i mykey.pem testfile.txt ubuntu@3.110.25.60:/home/ubuntu/
```
