

# AWS RDS – Create MySQL Database and Connect using MySQL Workbench

## Task:

Create a MySQL database using AWS RDS and connect it using MySQL Workbench.

### (a) Create RDS MySQL Database:

1. Login to AWS Management Console  
Open <https://aws.amazon.com/> and sign in
2. Open **RDS Service**  
Search and select RDS
3. Click **Create database**
4. Choose database creation method:
  - Standard create
5. Engine options:
  - Select **MySQL**
6. Templates:
  - Choose **Free tier**
7. Settings:
  - DB instance identifier: `mydb`
  - Master username: `admin`
  - Master password: `Admin@12345`
8. Instance configuration:
  - DB instance class: `db.t2.micro`
9. Connectivity:
  - VPC: default
  - Public access: Yes
  - Security group: allow MySQL (Port 3306)
10. Click **Create database**

## (b) Allow Access in Security Group:

1. Go to EC2 → Security Groups
2. Select RDS security group
3. Edit inbound rules:
  - Type: MySQL/Aurora
  - Port: 3306
  - Source: My IP (or 0.0.0.0/0 for testing)
4. Save rules

## (c) Install MySQL Workbench:

1. Download MySQL Workbench from:  
<https://dev.mysql.com/downloads/workbench/>
2. Install and open Workbench

## (d) Get RDS Endpoint:

1. Go to RDS Dashboard
2. Select your database ( mydb )
3. Copy **Endpoint**

Example:

[mydb.xxxxxx.ap-south-1.rds.amazonaws.com](https://mydb.xxxxxx.ap-south-1.rds.amazonaws.com)

## (e) Connect using MySQL Workbench:

1. Open MySQL Workbench
2. Click **+ (New Connection)**
3. Enter details:
  - Connection Name: AWS RDS MySQL
  - Hostname: RDS Endpoint

- Port: 3306
  - Username: admin
4. Click **Store Password** and enter:
    - Password: Admin@12345
  5. Click **Test Connection**
  6. Click **OK**

## (f) Verify Connection:

1. Open connection
2. Run query:

```
SHOW DATABASES;
```
