

AWS S3 – Configure Bucket Permissions (Public Access using ACL and Bucket Policy)

Task:

Create an S3 bucket, disable Block Public Access (for testing only), and provide public access using ACL and Bucket Policy.

(a) Create S3 Bucket:

1. Login to AWS Management Console
Open <https://aws.amazon.com/> and sign in
2. Open S3 Service
Search and select **S3**
3. Click **Create bucket**
4. Enter Bucket Details:
 - Bucket Name: my-public-bucket-12345 (must be unique)
 - Region: Choose nearest region (e.g., ap-south-1)
5. Click **Create bucket**

(b) Disable Block Public Access:

1. Open created bucket
2. Go to **Permissions tab**
3. Click **Block public access (bucket settings)**
4. Click **Edit**
5. Uncheck:
 - Block all public access
6. Confirm warning and click **Save changes**

(c) Enable Public Access using ACL:

1. Go to **Permissions** tab
2. Find **Access Control List (ACL)**
3. Click **Edit**
4. Under **Public access**, enable:
 - Everyone (public access)
5. Select permission:
 - ✓ Read object
6. Save changes

(d) Give Public Access using Bucket Policy:

1. Go to **Permissions** tab
2. Click **Bucket policy**
3. Paste the following policy:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "PublicReadAccess",
      "Effect": "Allow",
      "Principal": "*",
      "Action": "s3:GetObject",
      "Resource": "arn:aws:s3:::my-public-bucket-12345/*"
    }
  ]
}
```
