

AWS S3 – Static Website Hosting using GitHub

Task:

Host a static website on Amazon S3 using files from GitHub.

(a) Create GitHub Repository:

1. Go to <https://github.com>
2. Click **New Repository**
3. Enter details:
 - Repository name: `my-static-website`
 - Set to **Public**
4. Click **Create repository**

(b) Upload Website Files to GitHub:

1. Open your repository
2. Click **Add file** → **Upload files**
3. Upload files:
 - `index.html`
 - `error.html`
 - `style.css` (optional)
4. Click **Commit changes**

(c) Create S3 Bucket:

1. Go to AWS Console → S3

2. Click **Create bucket**
3. Bucket name: `my-github-site-12345` (must be unique)
4. Uncheck **Block all public access**
5. Click **Create bucket**

(d) Enable Static Website Hosting:

1. Open bucket
2. Go to **Properties tab**
3. Scroll to **Static website hosting**
4. Click **Edit**
5. Select:
 - Enable
 - Index document: `index.html`
 - Error document: `error.html`
6. Save changes

(e) Download Files from GitHub to S3:

Method 1 (Manual Download & Upload):

1. Go to GitHub repository
2. Download ZIP or copy files
3. Extract files locally
4. Upload to S3 bucket:
 - Go to **Objects** → **Upload**
 - Upload all website files

(f) Add Bucket Policy:

Go to **Permissions** → **Bucket policy** and paste:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Principal": "*",
      "Action": "s3:GetObject",
      "Resource": "arn:aws:s3:::my-github-site-12345/*"
    }
  ]
}
```
